

Transporting Biohazardous (including human blood, body fluids and tissue) Items:

Biohazardous items transported in interstate commerce must be transported in accordance with DOT regulations. In other words a carrier such as FedEx. Biohazardous items being transported from one building to another by SUNY Upstate Medical University personnel (or under an Upstate approved project) must be transported by labeled (i.e., biohazardous stickers) and sealed (i.e., locking handle cooler) secondary containment (i.e., test tube in plastic bag in locking cooler).
